

PRO-TECH

Transform costly, antiquated methods used to prevent posting of incoming unauthorized ACH debits into a mobile, customer-engaging, revenue-generating service with **PRO-TECH** from ACH Alert!

Customers want mobile, interactive fraud-prevention services. **PRO-TECH** helps you deliver convenient account control to business and/or consumer customers for a premium fee, while at the same time reducing costly manual processes for your financial institution.

PRO-TECH's NACHA Rules intelligence, automation and enterprise design is sophisticated enough to surpass the expectations of your treasury customers, yet simple enough to be used by small business customers and consumers. **PRO-TECH** allows you to expand your fraud-prevention services to a broader base of customers without expanding staff to support it.

How it works: Enroll customer accounts with a default pay or return setting, and leave the rest to them! Customers decide how and under what conditions they get alerts for incoming ACH debits. Upon receipt of an alert, your customer can return a debit (completing a pre-populated Written Statement of Unauthorized ACH Debit when applicable), pay it once or add it to their approved list (filter setup is "on-the-fly") with optional parameters like maximum amount, frequency and start and end date.

PRO-TECH requires no system integration, systems replacement or equipment purchases. Simply insert **PRO-TECH** into your daily ACH processing flow or take advantage of our full outsourcing program.

Built-in billing capability, including ACH and analysis help you automate billing. Branded sales and training videos drive adoption and simplify on-boarding.

Finally... a *positive* ACH positive-pay experience!

To learn more, go to www.achalert.com and view the comprehensive online demo or contact us at **866.265.8961** today for a consultation.
